Claims 1-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 20-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 20, 28 and 30 the term "the peripheral side" is ambiguous and unclear because the claims recite multiple possible referents for the limitation.

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a

Art Unit: 2827

terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 20, 24, 25, 28 and 31 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 2, 6, 7, 10 and 13 of prior U.S. Patent No. 6,277,673. This is a double patenting rejection.

To further clarify, although some of the instant claims are differently worded than claims of the prior patent, they define the same invention. Specifically, the grammar of the instant claims differs slightly from that of the prior patent, but the differences are not semantically significant, and the scope of the instant claims is the same as the scope of the prior patent claims.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 21-23, 26, 27, 29 and 30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 3-5, 8, 9, 11 and 12 of U.S. Patent No. 6,277,673 in view of Kierse (5541446).

The patent claims 3-5, 8, 9, 11 and 12 do not recite forming a die paddle. Nonetheless, at column 3, line 65 to column 4, line 15, and column 4, lines 36-40 and 52-55, Kierse teaches forming a die paddle 26 and 44. Moreover, it would have been obvious to combine the process of Kierse with the process of 6277673 because it would support the device.

To further clarify the teaching of a die paddle, although Kierse states that the invention "does not utilize a leadframe paddle," 26 and 44 of Kierse are paddle-shaped central portions of a lead frame onto which a die and adhesive is placed during die attach; therefore, 26 and 44 are die paddles.

Also, patent claims 8 and 9 do not recite placing tape between the die paddle and the bottom inactive surface of the device.

Nevertheless, as cited, Kierse teaches this process. Furthermore, it would have been obvious to combine the process of Kierse with the process of 6277673 because it would support the device.
